

FOR IMMEDIATE RELEASE

Quality Turbo Expands Into Locomotive Sales and Acquisition

Houston, TX & Paducah, KY — Quality Turbo, a trusted leader in turbocharger remanufacturing and locomotive components with more than 150 combined years of expertise, announced a major expansion of its business to include buying and selling locomotives for commercial, industrial, and military use.

Since its founding, Quality Turbo has built a strong reputation for high-quality turbocharger products and field service support for rail, marine, and power generation industries and has steadily grown its offerings in parts supply and international sales.

The company has also secured federal contracts to provide technical support services for locomotive operations including maintenance and field support for the U.S. Army's full fleet including the government's ultra-low emission locomotives demonstrating its capabilities in complex rail support work.

"It was the next logical step in our growth," said CEO & Founder Eric Baldaccini. "After our recent award of locomotive support work with Volpe/the U.S. Army, we recognized a strong demand from operators for a trusted partner who can not only service locomotives and components but also acquire and sell complete units tailored to customer needs. We're proud to announce Quality Locomotive as that solution."

In continuing its long-standing commitment to dependable service, Quality Turbo and Quality Locomotive will maintain and expand its locomotive servicing and field deployment teams to keep customers' rail lines moving efficiently. With the new locomotive buying and selling division, the company will provide commercial freight locomotives built and tailored with the same passion, expertise, precision and quality that have defined its turbocharger business for decades.

Brandon Schwartz, CCO, added, "Every one of us comes from locomotive and rail backgrounds and carries a wealth of knowledge that we feel can truly help our customers succeed. That has always been and will continue to be our number one goal. And we know when it comes to being a quality source for locomotives we can continue that success."

Quality Turbo's facilities in Houston, Texas and Paducah, Kentucky are strategically located for rapid deployment and logistics support, enabling the company to serve customers across North America and around the globe with built-to-suit locomotive solutions and long term service.
